

Guilford Technical Community College (GTCC)

Guilford Technical Community College provides customized, industry-specific workforce training programs to help companies achieve a world-class workforce. Most classes are taught at the business site, although they can be taught at a GTCC campus or another site. GTCC can help a company determine training needs and develop customized programs to meet those needs. The college is committed to promoting economic growth in the community through the following initiatives:

Customized Training Programs

The North Carolina Community College System administers the State's Customized Training Program: state-funded training, customized for the company, delivered on site or at a Guilford Technical Community College (GTCC) campus, based on company preference. Many Greensboro companies have used this training, including Volvo Trucks NA, Tyco Electronics, and American Express.

New and Expanding Industry

GTCC can train workers to exact job requirements. This training is state-funded and is available to any new or expanding company that creates a minimum of 12 new jobs in the state. Regardless of the company's location, size, product or service, GTCC can provide a custom-designed employee training program at virtually no cost.

Occupational Extension and On-Site Training Programs

This program provides affordable training for existing businesses starting with an on-site meeting to assess the client's needs followed by a customized training program that can be delivered at a GTCC campus or at the business facility. The training is designed to minimize disruption to the business's schedule.

GTCC Quick Facts
